Portfolio: <https://akshayjadhavajcr.netlify.app/>

Career Objective

Seeking a position that will improve my expertise in React and related technologies, while contributing to the development of innovative and impactful web solutions.

Key Skills

Frontend: HTML, CSS, Tailwind CSS, JavaScript, React

Database: SQL

Other Technologies: Basic understanding of: - Angular, WebApi, C#, Microsoft Azure, Node Js, Mongo DB, Express

Experience

Associate in **Cognizant technology Solutions India Private Limited**. Pune (Nov 2020- Till Now) 2 years 5 months

Work Experience

- **Pet Parent Look Up Tool**

Description: Design and Develop the Customer data look up tool that shows the customer related data that can be used by operation team to resolve the customer account related issues. Built variations of this tool as per need of different teams that work on different applications. Closely work on operation team to understand the requirement and build customized UI for that team.

1. **MDM Look Up Tool-**

Worked on the MDM tool that fetches customer data from MDM database and show customers details and its keys related to all applications that helps operation team to resolve the customer related issues.

2. **MERGE Look Up Tool-**

Worked with operation team to understand the customer account merge issue. To understand the requirements manually resolved the merge issue which need understanding of multiple application data. With that requirements built the tool that shows merge account information and indicators whether to merge the accounts or not. It significantly reduces incident resolution time.

Tools and Technologies used: React, Postman, VS code, GitHub, Tailwind CSS, JavaScript, SQL Server 2017
